

Aabeda Aiyub Patel

Data Analytics Consultant | MBA Candidate — Business Analytics | Business Intelligence

Surat, Gujarat, India

aabedapatel.analytics@gmail.com

aabedaaiyub.github.io

PROFESSIONAL SUMMARY

MBA Business Analytics candidate (graduating 2026) with hands-on expertise in Power BI dashboard development, machine learning, statistical modelling, and big data analytics. Completed 8 end-to-end analytics projects spanning fintech, aviation, retail, healthcare, renewable energy, and public policy. Proven ability to translate complex datasets into actionable business insights. Seeking roles in Data Analytics, Business Intelligence, or freelance engagements.

EDUCATION

MBA — Business Analytics

S.R. Luthra Institute of Management, Sarvajanik University · Surat, Gujarat

2024 – 2026

CGPA- 8.96

BBA — Marketing

Vanita Vishram Women's University · Surat, Gujarat

2021 – 2024

CGPA- 8.18

INTERNSHIP EXPERIENCE

Internship Trainee

Sep 2025 – Nov 2025

KalpShree Investments

- Observed investment operations and financial workflows at a Surat-based investment firm.
- Gained exposure to how financial data and analytics inform portfolio management decisions in the Indian market.

Summer Intern — MBA Programme

May 2025 – Jun 2025

KPI Green Energy Ltd (KP Group)

- Observed solar plant performance monitoring and operational analytics at a leading renewable energy company.
- Studied how BI dashboards and data practices drive efficiency in sustainability-focused energy operations.
- Gained exposure to real-time energy production data management and reporting workflows.

Summer Intern — BBA Programme

May 2023 – Jun 2023

KP Energy Ltd (KP Group)

- First industry internship — observed renewable energy sector operations and business practices.
- Applied theoretical knowledge to real-world business context in a large-scale energy organisation.

TECHNICAL SKILLS

Data Visualisation	Microsoft Power BI — DAX, Star Schema, Drill-throughs, Custom Visuals (13+ dashboards built)
Programming	Python — pandas, numpy, scikit-learn, statsmodels, scipy, seaborn, matplotlib
Low-Code ML	KNIME Analytics Platform — end-to-end ML pipelines, K-Means clustering, regression workflows
Machine Learning	Random Forest, K-Means Clustering, Linear Regression, GLM Mixed Effects, ARDL
Statistics	Cointegration, Granger Causality, ADF, ANOVA, Wilcoxon, Friedman, Shapiro-Wilk
Cloud	AWS Analytics Fundamentals (Certified) — cloud data pipelines, storage, architecture basics
Tools	Google Colab, Jupyter Notebook, Microsoft Excel, PowerPoint

ANALYTICS PROJECTS

01. Indian FMCG Retail Chain Analytics

Power BI · DAX · Star Schema · FMCG Retail

- Built 8 interactive Power BI dashboards on a star schema for a 30-city retail chain (Rs.235M total sales).
- Key insights: loyalty penetration only 18%; seasonal discounts boosted sales by 34%; South region led profit margin at 27%.
- Designed drill-throughs and custom DAX measures for executive-level insight delivery.

02. Aadhaar Ecosystem Health Framework

Python · pandas · seaborn · Policy Analytics · GovTech

- Designed the Identity Health Score (IHS) — a custom composite metric to rank 36 Indian states on Aadhaar operational health.
- Cleaned and processed 590,000+ UIDAI records; applied sigma-based tier classification (Platinum / Gold / Silver / Needs Attention).
- Found 8 states in Needs Attention tier; Kerala and Maharashtra led nationally; rural area had highest error rates.

03. Superstore Business Performance Dashboard

Power BI · DAX · Retail Operations

- Built 5 Power BI dashboards across sales, products, geography, customers, and operations on a 9,994-transaction dataset.
- Identified 12.47% vs 15% profit margin gap; Technology category most profitable; West region over-indexed on discounting.

04. Cryptocurrency Pair Trading Analysis

Python · statsmodels · ARDL · Fintech · Econometrics

- Applied sequential econometric framework: ADF stationarity, Engle-Granger cointegration, Granger causality, ARDL model.
- Analysed BTC, ETH, XRP, XLM — BTC-ETH showed strongest cointegration; XRP leads XLM in causality.
- Supported by 30-paper literature review on crypto market efficiency and statistical arbitrage strategies.

05. U.S. Flight Delay Prediction

Python · scikit-learn · Random Forest · Aviation · Machine Learning

- Built Random Forest regression model on 13 years of FAA data (4,408 records); achieved $R^2 = 0.80$.
- Flight volume explains 70.6% of total delay variance; ATL, ORD, DFW identified as highest-delay hub airports.
- Recommended proactive capacity management at high-volume hubs during summer peak season.

06. Renewable Energy Efficiency Evaluation

KNIME · K-Means Clustering · Energy Analytics

- Built KNIME pipeline to segment 7 renewable energy types into 3 performance clusters via K-Means clustering.
- Cluster 1 (High Efficiency): Biomass, Solar. Cluster 2 (Moderate): Wind, Hydro. Cluster 3 (Emerging): Tidal, Wave, Geothermal.
- Biomass led on consistency score; Solar ranked highest in scalability; geographic constraints limit Tidal and Wave.

07. Facebook Sentiment and H&M Revenue

KNIME · Linear Regression · Marketing Analytics

- Linear regression on 24 quarterly records and 34 Facebook engagement variables (H&M, 2009-2014).
- UGC posts showed $r=0.52$ correlation with revenue — strongest predictor; branded posts had $r=0.31$.

08. Aloe Juice Clinical Study Statistical Analysis

Python · scipy · statsmodels · Healthcare · Clinical Statistics

- Analysed randomised clinical study: 23 cancer patients, 6-week Aloe vera juice intervention.
- Applied GLM mixed effects, Wilcoxon, Friedman tests; time effect significant ($p<0.05$ at Week 4 and 6); treatment $p=0.4529$.
- Recommended larger sample ($n\geq 60$) and double-blind design to isolate the therapeutic effect of Aloe vera.

CERTIFICATIONS & AWARDS

Fundamentals of Analytics on AWS — Part 1	Amazon Web Services	2025
Low-Code Machine Learning with KNIME Analytics	KNIME	2025
Advanced Microsoft Power BI	Microsoft	2025
1st Rank — Poster Making Competition	S.R. Luthra Institute	2024
